## Volatility ratings for funds

The volatility rating for a fund indicates how much the fund price might move compared to other funds. The higher the volatility rating, the less stable the fund price is likely to be. You can use this to help you choose between funds with different volatility ratings.

The volatility ratings of our funds are calculated using the European Security and Markets Authority (ESMA) guidelines, which use a 7 point scale to rate funds based on their 5 year annualised volatilities.

Higher volatility ratings typically mean greater potential investment returns over the longer term. But high volatility funds can suddenly fall or rise in value.

Volatility ratings are regularly reviewed and may change over time.

The volatility rating is not the only factor you should consider when selecting a fund. If you're not sure which funds to choose, please seek advice from a financial adviser.

**The value of investments within these funds will go down as well as up and may also be affected by changes in currency exchange rates. The information shown relates to the past. Past performance is not a guide to the future.**

This document is not an advertisement. A decision to invest should not be based on the information in it. Please talk to your financial adviser for more information, or if you need an explanation of the terms used.

### Fund Centre

For more information on a fund, you can read its latest factsheet.
