Source: Aberdeen Standard Investments to 31 January 2019. Performance is gross of annual management charge (AMC).

* This fund is not available on Synergy PRSA.

** You can only switch out of this fund (closed to new investments and switches in).

The value of investments within these funds will go down as well as up and may also be affected by changes in currency exchange rates. The information shown relates to the past. Past performance is not a guide to the future.

Max drawdown - The max drawdown of a fund is the maximum loss a fund would have experienced over a specific time period. So this is a measure of the fund performance from its highest point to its subsequent lowest point (peak to subsequent trough).

Volatility - Investing in any fund runs a risk of losing money. Some funds are riskier than others. Looking at the volatility of the fund is the way to measure the risk involved. In this document volatility has been calculated as the annualised standard deviation of the fund's monthly returns. High volatility means that a fund is more likely to suddenly fall or rise in value than a fund with lower volatility. These amounts are also more likely to be more significant.

The max drawdown and volatility figures only include funds with a since launch period greater than 1 year.
